

Daycare Security

Return of investment for the daycare center

- Show parents that you care and reassure them of the quality of your care
- Automate the tracking of time and attendance of children
- Eliminate staff time cards and time consuming calculations for hours worked, overtime hours, and employees' disputes
- Prepare to address regulation compliance requirements

The system allows you to monitor your personnel from a Web-based console at any location with internet access. Additionally, the fact that parents/guardians could be watching their children, would naturally tend to improve the level of care at your facilities. It can help you significantly lower your costs of monitoring the personnel while increasing your operational efficiencies.

((Daycare Security Solution))

Children's Safety First

A question that goes through parents' mind every day is whether their children are safe at the daycare center while they attend to their daily routines. You trust the credentials of the institution that assume the safety of your children.

Would you feel more at ease if you had visibility into the whereabouts of your beloved child while at the daycare center?

This insight would bring about certain level of comfort that the daycare center is delivering on its promise of treating your child's safety as the highest order of priority task on their plate.

((AiRISTA Technologies))

Technologies That Support Children's Safety

Our vision is to promote the use of the latest technologies in child care environment to assist the parents and the care providers in achieving higher standards for the safety of our children. RTLS (Real Time Location Systems) is a proven revolutionary technology currently used to track the elderly at assisted living facilities, locate patients and medical personnel at medical care centers, and report on children's attendance and bus ridership at various schools. This technology is now prime to be used to identify and track children's location and movement while within the care provider's facility. AiRISTA in coordination with Apple Tree Children's Center brings this technology over to this personal domain, with a smaller, lighter, and lower power tag that can be sewn into your child's clothes, or tied on their hand like a wristwatch. Parents are enabled to track the movement of their children on their personal computer at h relevant medical staff within the healthcare facility.

AiRISTA develops and delivers a wide range of turn-key solutions incorporating RFID, RTLS, GPS and related technologies that enables real-time management of mobile personnel, assets and resources to government and commercial clients. With our robust and comprehensive Track and Trace solutions, clients realize a reduction in resources, cost and errors while benefiting from increased efficiencies, productivity, safety and revenues.
